

35 million tourists trample the surface of Fremont Street annually. FlexKRETE Concrete Repair Systems are being used to beautify nearly 200,000 square feet by repairing deteriorated concrete, broadcasting color chips into FlexKRETE-102 and applying our highly durable topcoat.

---

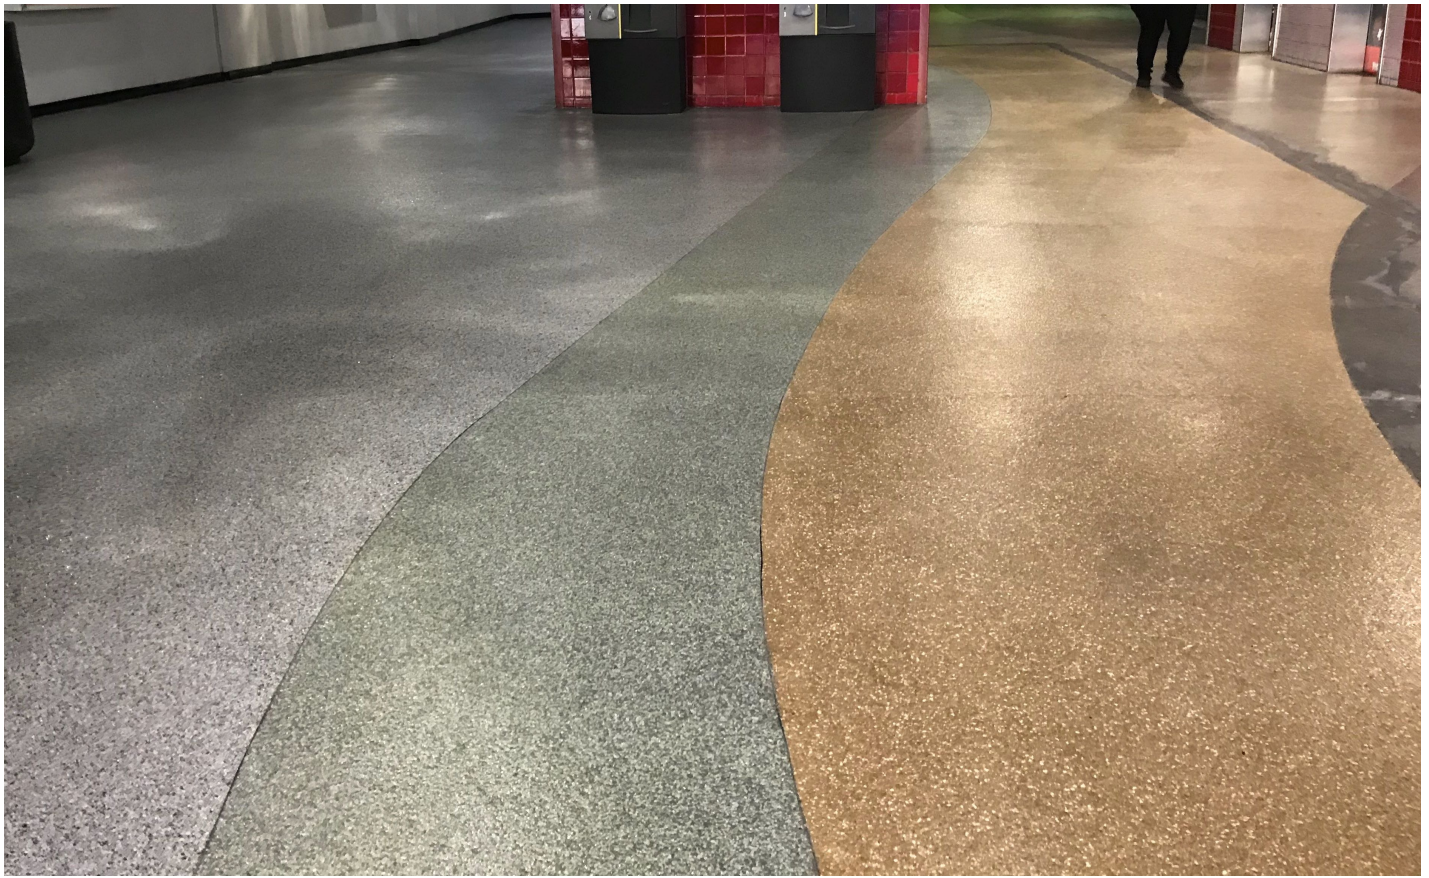

## The Fremont Street Experience | Las Vegas

**5 City Blocks | Almost 200,000 s.f. | 35 Million Yearly Visitors**

**This massive project was underway during WOC 2018** and many of our booth visitors were able to witness the section-by-section transformation throughout the week. The process begins with the FlexKRETE horizontal concrete repair method for cracks, divots, joints, and spalls. Then, immediately broadcast the specified color chip design into FlexKRETE-102, and finish by applying our highly durable topcoat. Our Las Vegas distributor [JES Supply](#), along with [Terra Contracting](#) are doing an outstanding job and opening the finished areas to traffic in record time!

**Below is an image of the first nearly-completed section** of the project and located in the Fremont Experience parking facility. It provides a good perspective on design options that look great while being extremely durable.

**We'll send updates on the project** over the next few months as completion is expected sometime in late spring. Before and after images will be available along with details of the step-by-process and project scope. If you happen to be in Las Vegas in the next few months, be sure to visit Fremont Street and check out the project firsthand - and let us know what you think!
