

Rumble Strips,

Filled FlexKrete so you can have a nice, smooth ride on the newly opened lane.

IMAGINE

The constant flow of trucks and cars pounding on a patch that is only 1/2" deep and feather-edged on all sides.

The engineer who wrote this **Special Specification #5815** said he believes FlexKrete is the only material that can stand up to such a grueling demand.

After several years in service, he is not disappointed.

Tenacious adhesion, PSI-10,000+, resiliency-99%, adheres to concrete, asphalt, wood steel, aluminum, fiberglass. Just some of the reasons FlexKrete works great on horizontals, verticals, overheads and more.

FLEXKRETE

The World's Most Universal Product!
