# **NSP 122 Industrial Floor Coating**

**Description:** NSP 122 is a two-component, high performance, self-leveling epoxy floor coating. This 100% solids

formulation provides excellent protection for areas exposed to the harsh effects of abrasive traffic, impact and chemical exposure. With proper application, NSP 122 effectively restores and protects new and old concrete floors leaving a smooth durable finish that is easy to maintain. Full cure in twelve

hours makes NSP 122 the ideal choice for maintenance projects on a fast track.

Intended

**Uses:** New construction or concrete restoration projects

Commercial garage service areas

Manufacturing Areas

Aisles

Aircraft Hangers Clean Rooms

Product Features:

Moisture Tolerant- 12 hour Full Cure

Offers less downtime than most generic coatings

Glass filled for enhanced toughness

Tenacious adhesion on properly prepared surfaces

Tile like high gloss finish easy to clean

Self-leveling, easy application with squeegee and roller

Environmentally sound

Available in a variety of standard colors

**Approvals:** Accepted for use by the USDA in Federally Inspected Meat/Poultry Plants

Accepted by the Canadian Food Inspection Agency in Registered Establishments

**Physical** 

**Data:** Type: Modified Epoxy Resin/Proprietary Blend Amine Adduct Hardener

Color: White, Black, Tile Red, Light, Medium and Dark Gray. Safety Colors and other non-standard

colors available upon request

Components: Two Gloss: High

Mixed Ratio: 2 Parts A (Resin): 1 Part B (Hardener) by volume

Volume Solids: 100% - VOC 0 lbs/gal

Pot Life @ 77F/25C: 30 minutes

#### NSP SPECIALTY PRODUCTS

**Technical Data Sheet** 

# **NSP 122 Industrial Floor Coating**

Physical Data:

Maximum Recommended Service Temperature: Dry Air 300F/149C

Application Temperatures: 50-90F (10-32C) Minimum Recoat Time @ 77F/25C: 6 hours Maximum Recoat Time @ 77F/25C: 48 hours

Minimum Cure Time – Full Service @ 77F/25C: 12 hours

Theoretical Coverage: 1604 sq/ft/gal/mil – Allow for appropriate loss

Minimum Recommended Thickness: 10 mils

Recommended Spread Rate: Dependent upon concrete porosity, service environment and desired

aesthetic.

Maximum Thinner: Not recommended

Packaging: Pre-portioned 3 Qt. Kit/ 3 Gal Kit/ 15 Gal Kit

**Limitations:** This product may not cure properly in temperatures below 50 F (10 C)

All epoxies will show chalking/yellowing on exterior exposures. Application of epoxy coatings in cool temperatures and high humidity can result in the formation of amine blush. Blush may appear as a milky, white, tacky residue on the surface of the cured coating and must be removed before the application of another coat. Intercoat adhesion problems may occur if blush is not removed.

Surface

**Preparation:** Concrete must be properly cured for a minimum of 28 days before application of coating. Surface must

be entirely free of oil, grease, dirt, detergent, surface water, laitance, curing compounds, coatings or other contaminants that may interfere with adhesion. The concrete must be abrasive blasted to provide an anchor pattern (similar to 60-80 grit sandpaper min.) for adhesion. Final prepared surface should be

clean and rough. Consult SSPC-SP13 – Surface Preparation of Concrete.

Mixing

**Instructions:** This is a two-component system. Prior to mixing, components A Resin and B Hardener should be at

room temperature (60-75 F/16-24C). Pour Part B Hardener into Part A Resin. Mix for 3 minutes using a Jiffy mixer head and a mechanical drill. To ensure complete mixing, scrape sides and bottom of container and continue mixing for an additional 1 or 2 minutes. Do not mix more material than can be applied within the pot life. DO NOT HAND MIX. Begin application immediately – no induction time

required.

**Application:** Air and surface temperature should be between 50-90F/10-32C. Do not begin application if air,

substrate or material temperature is below 50 F/10C or expected to fall below 50F/10C within 12 hours of application. Do not begin application if dew point is within 5F/3C of the temperature. Variations in temperature can affect pot life properties of this material. NSP-T1 Thinner will not clean hoses or equipment adequately. Clean up using Acetone or other Ketone Solvent. For concrete surfaces, a primer cost of either NSP 100, 101, and 110 is strongly recommended.

coat of either NSP 100, 101 and 110 is strongly recommended
